Cyber Security Training Centre of Excellence is honoured to invite you to participate in the first conference CyberEXPERT 2021 - Methods and tools in producing cyber capability of the Polish Armed Forces – challenges and opportunities.

The conference will be the first of annual meetings aimed at building knowledge and experience in the fields of IT, cyber and cryptology. Among institutions whose contribution and support in organising this year's conference is greatly valued are National Cyber Security Centre (NCSC) and Institute for ICT and Cybersecurity (ITC) at the Faculty of Cybernetics of the Military University of Technology in Warsaw.

In the field of cybersecurity, every year brings new challenges. The best way to face them successfully is by making a coalition to defend networks and ICT systems. The transfer of knowledge, developing awareness of

potential threats, exchange of experience and openness to new ideas and opportunities will allow us to build a kind of 'resilience' to threats appearing in the cyber domain. Our conference will be a meeting of experts and enthusiasts of cybersecurity from Poland and abroad.

After the plenary session, which will initiate the conference, we will invite participants to take part in two parallel thematic panels. The speakers in the first panel will broach legal aspects of reconnaissance and OSINT analysis, and those in the second one will focus on technical aspects of cybersecurity. The conference will be concluded by a closing plenary session with speeches by thematic panel leaders and by the Director of CST COE, Paweł Dziuba.
